

# REVIEW

Remview is a compact CCTV solution comprising a high definition camera with integral infra-red illumination, video analytics intruder detection, video recording, and 3G/4G/WiFi connectivity.

- ✔ **Uses intelligent video analytics to detect intruders**  
Integrated video analytics software provides reliable intruder detection and control room notification of images recorded when detection occurred.
- ✔ **Rapid Deployment Solution**  
Using Remvox's innovative temporary and permanent mounting systems Remview units can be deployed and operational in a matter of minutes.
- ✔ **On-board recording and Cloud storage of images**  
Utilising 3G / 4G connectivity Remview can store video footage in the Cloud for up to 12 months if required as well as providing on-board video recording as a back-up solution.
- ✔ **Remote viewing from a smartphone or tablet**  
Remvox Cloud viewing software enables viewing, configuration and retrieval of video recordings via a smartphone or tablet.
- ✔ **Solar powered**  
Utilising the Remvox solar solution as an option, Remview units can be operational 24/7 where grid power isn't available.

The Remview units are rapidly-deployable CCTV systems for your site or premises which can be stand-alone or integrated into larger systems facilitating complete area coverage. They have built in video analytics detection software providing intruder detection. This is far more effective than Passive Infra-Red detectors which are very susceptible to false alarms. They have on-board digital video recording and 3G/4G connectivity providing Cloud storage and can be remotely viewed or accessed via a smartphone, tablet or pc. They are quick and inexpensive to install and simple to redeploy if your needs change. They work well with Remvox audio intervention speakers and are particularly suitable for void properties as well as eliminating gaps in your current camera coverage.
